

## The Hamilton Multi-Purpose Conveyor

The Hamilton Multi-Purpose Conveyor can be fitted with our Watering Bar system and motorised Vermiculite Coverer.

The Watering Bar is a simple, effective method of watering all types of tray. It applies the exact quantity of water you require, precisely where you want it – on the tray – with virtually no run-off. Automatic start/stop and water flow regulation is standard on all models. Water bars are custom made to suit the tray.

The Vermiculite Coverer is for coating trays with vermiculite after they have been sown, prior to watering. Covering depth is variable and can be adjusted for different grades of vermiculite. A hopper extension is supplied as standard (not shown).

The speed of the 2000x600mm conveyor is infinitely variable, and has adjustable guide rails to accommodate different tray widths. Rubber tyre castor wheels are fitted for easy movement.
