

Hamilton Design Ltd Service & Sales Bulletin

Date: 11/12/2000

Model: Hamilton Drum Seeder

Subject: Drum Brush Replacement with Seed Valley End Seals (DS051V)

The Seed Valley End Seals replace the original Drum 'V' Brushes, which had a tendency to splay out and become ineffective if not maintained correctly. The plastic seals are manufactured from hard-wearing high-impact ABS material and should last for several seasons if used in accordance with the instructions.

The seals clip to the curtain tubes as shown and fit snugly into the seed valley. The seals will contain all but the smallest of seeds. When sowing tiny seeds such as lobelia the Air Jets can be used to prevent seeds from leaking past the seals.

The seals are supplied as a kit consisting of one pair of seals and instructions. Quote part number DS051V when ordering. The original 'V' brushes have been withdrawn and are no longer available.
